

2020 KA Winter Day Camp

GRADES 1&2

DECEMBER 27TH - 29TH

ENGLISH

When it comes to travel, different people like different things. Some enjoy the many sights and sounds of the big city. Others prefer to stroll around historical ruins or lie in the sun on a sandy beach. And then there are those of us who love to visit snowy wonderlands—to ski, ice skate, and to enjoy the cold, crisp air! And that's what you will be doing in this class—taking tours of some of the world's most beautiful winter destinations.

SCIENCE

What does it take to be a good scientist? Curiosity, for starters. Of course, having a good brain is important. But to be a great scientist, you need to be able to look at a problem—a natural condition or event—and ask the right questions about it. Then you have to take it one step further and conduct experiments to find the answers.

In this class, you will explore the science of color. You will also learn about liquid density and why some liquids are heavier than others. Be prepared to test out some super-cool science experiments, too.

ART

For art, you will be making a marble maze. You will be using a box, some popsicle sticks, and pieces of origami paper to create your maze course.
